

# SIGNificant™ Client

The SIGNificant Client enables signing and sealing electronic documents using a broad range of signature-capturing devices from various manufacturers, in addition to smartcards, tokens and software certificates. The SIGNificant Client is especially suited for professionals whose working conditions do not include online connectivity on a regular basis or for those who wish to work offline.

The SIGNificant Suite creates an environment that allows document exchange between the SIGNificant Client and the web interface of the SIGNificant Server; thus, the signing process can start with one tool and continue with the other, depending on the working conditions.

## Benefits

- **Handwritten Signature Capturing** – Our captured electronic signature is much more than just an electronic image. We record the handwritten signature of a person using parameters of pressure, speed and rhythm. These parameters are unique to every individual and cannot be easily reproduced by a forger.
- **Fully Secured Document** – Once a signature including all the biometric parameters has been embedded into a document it is turned into a signed and sealed PDF.
- **Document Attachment** – With the SIGNificant Client any document like a scanned passport, scanned driver's license or any other native MS-Office document can be attached.
- **Completely Signature Pad Independent** – Our solution is a device-independent solution, meaning it enables the use of a broad range of signature capturing devices from various manufacturers.
- **Seamless Integration with Existing Processes** – xyzmo SIGNificant's solutions are highly flexible, enabling easy integration into any existing DMS, ERP, CRM, archiving or other legacy systems, using the extensive SIGNificant API.
- **Verifiable by Anyone, Anywhere** – The signed document along with the signature graphics and data generated with SIGNificant Client can be viewed and verified by anyone either with Adobe® Reader or via a verification webpage.

**xyzmo Software GmbH**  
 Haiderstraße 23  
 4052 Ansfelden, Austria

## Features

- **On the Fly Signing and Document Design** – the user can choose to sign a document instantly or define signers and signature fields according to his needs.
- **Template Recognition** – the SIGNificant Client recognizes existing signature field indications on predefined templates automatically and assigns signers and signature fields accordingly.
- **Biometric Signature Authentication** – when the 'Authenticate' box is checked, the signature is compared with the enrolled signature profile stored on the SIGNificant Biometric Server. In any case the biometric data is embedded into the document for future analysis in case of a legal dispute.
- **Easy Navigation** – the signers' tree displays the signers and signature fields defined for the current document, enabling easy navigation between these fields.
- **Scanning and Attachments** – attach any document like a scanned driver's license, scanned passport or any native MS-Office document. Scanning can be initiated directly within the Client.
- **Forward to Next Signer** – easily e-Mail the signed document to the next signer.
- **PDF Conversion** – the SIGNificant Client is equipped with a printer, enabling conversions of any printable content to PDF format.
- **Versatile Signing Methods** – using the SIGNificant Client, documents can be signed either with a handwritten signature, a personal certificate or a smart card.
- **Multiple Signatures Per Document** – the document can be signed multiply by different users like it is done on paper.

### Easy Creation and Control over Signature Flow >>> One Interface for All Purposes

### Simply Sign

- In order to sign a PDF document, you simply open it in the SIGNificant Client and either sign immediately, or design the document on the fly according to your needs before you have it signed.
- Next, apply your handwritten biometric signature using a signature tablet. The biometric data of your signature dynamics are embedded in the document together with a digital signature or alternatively seal documents with our customizable seal imprint and verify documents with a single mouse click!
- For the digital signature either a companywide default certificate can be used or a personal one located on a smartcard, e-token or any certificate store. With SIGNificant you sign electronic documents the same way you would on paper, allowing for a legally binding approval process.

### Your Document is Signed

The document is now signed and sealed against future modifications and can be viewed and verified by any external user using the free Adobe Reader. The signed document can be stored on your local computer and uploaded to the company's server at a later stage.

### System Requirements

**Operating System:** MS WIN XP x32 / Vista x32 / WIN 7 x32 & x64
